SKILLS AND ABILITIES

- HTML
- CSS
- JAVASCRIPT
- REACT
- BOOTSTRAP

ACADEMIC PROFILE

St.Joseph's College

B.COM COMPUTER APPLICATION, Class of 2022

CGPA: 6.69%

Dalmia High Secondary School

Graduated Class of 2019

Percentage: 41%

Vetri Vidyalaya High Secondary School

Graduated Class of 2017

Percentage: 79.4%

INTERNSHIP

FRONT-END DEVELOPER

Resulticks Edge Solution Technologies | April - August 2024

Functions: To manage different functionality inside the React application, I'll concentrate on developing and optimising JavaScript functions. This covers processing user events, interacting with APIs, and generating and maintaining state. Writing custom hooks, overseeing application logic, and ensuring code performance and efficiency may all be part of my job description.

Establishing and Managing State: I put state management systems into practice, frequently making use of Redux or the built-in state and context API in React. This gave me the ability to manage the application's dynamic data and make sure that user activities were appropriately and effectively represented throughout the user interface.

Performance Optimisation: I made sure that the functions I built were as efficient as possible, minimising needless re-renders, cutting down on load times, and enhancing the application's overall responsiveness. This frequently required profiling and reworking the code to eliminate bottlenecks.

Documentation: When it came to the documentation part of my job, I focused on developing concise, clear, and comprehensive documentation for every aspect of the projects. This included writing comprehensive user manuals, API documentation, internal development notes, and technical guides. The primary goal was to make sure that the features and functions of the program were easy for developers and end users to understand and utilise.

Blog: I concentrated on producing educational and interesting material for my blog, with the goal of sharing expertise, highlighting new features, and offering advice on best practices. I wrote about a variety of subjects in my blogs, such as case studies, industry trends, feature highlights, and tutorials.

Overall: Making sure the application's basic logic was reliable, effective, and able to provide a smooth user experience was my main concern when it came to functionality. This needed a thorough grasp of React and JavaScript in addition to problem-solving and application-specific implementation skills.
